acid probes useful for

probe for

```
measuring human gene expression in a sample derived from human foetal.

liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly, from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                  Claim 27; SEQ ID NO 32963; 639pp + sequence listing; English.
                                                                                                                                                         The invention relates to a single exon nucleic acid

crabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides
can also be used as a food additive or preservative to increase or
chromosome identification. They are also useful as probes for diagnosing
a disorder related to the female reproductive system, particularly breast
and/or ovary cancer. They are also useful in the gene therapy of breast
and ovarian cancer. Secreted protein nucleic acids, proteins,
and ovarian cancer. Secreted protein nucleic acids, proteins,
creatment and prevention of: (a) cancer; (b) immune disorders; (c)
cratiovascular disorders; (d) wound healing; (e) neurological diseases;
and (f) infectious diseases such as viral, bacterial, fungal and
parasitic infections. AAC74228 to AAC74326 and AAB33401 represent
sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                The polynucleotide sequences given in AAC74337 to AAC74386 encode the human secreted proteins given in AAB39402 to AAB3948 represent human secreted polypoptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in Example of activities include:
Fifty nucleic acid molecules encoding human secreted proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; foetal liver; gene expression; single exon nucleic acid probe

                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                      Human brain expressed single exon probe encoded protein SEQ ID NO: 33234.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                              Human; brain expressed exon; gene expression analysis; probe;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human peptide encoded by genome-derived single exon probe SEQ ID 33392.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; single exon probe; asthma; lung cancer; COPD; ILD;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to human single exon nucleic acid probes (SERP): see AAIIO08-AAIIS459). The present sequence is a petide encoded by one such probe. The SERPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptide #8060 encoded by probe for measuring placental gene expression.
                                 Peptide #6557 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

a collection or detectably tabeled nucleic acids delived tions named a warmy identifying exons in a eukaryotic genome, comprising

(a) algorithmically predicting at least one exon from genomic sequences

(b) algorithmically predicting at least one exon from genomic sequences

of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from enkaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon cypression of the exons in the tissues and/or cell types using hybridisation to a single exon meroarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases

CC (COPD), interstital lung disease (ILD), familial idiopathic pulmonary disease, neurodipromary placency, plannan-Pick disease, Hermansky-pudlak syndrome, sarcoidosis, pulmonary hasman-pick disease, Hermannaky-pudlak syndrome, sarcoidosis, pulmonary hasman-pick disease.
                                                                                                                                                                                                                                                                                                                           haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar protesinesis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                      Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of the printed specification, but was obtained in electronic format directly from WIPO at

The invention describes an isolated nucleic acid molecule (I) encoding a covel central nervous system protein. (I) and polypeptides (III) encoded to novel central nervous system protein. (I) and polypeptides (III) encoded a pathological condition. Disorders which are disgnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease and amglochtic lateral sclerosis, infections caused by bacteria, viruses c.g. capquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. deprinced immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. described infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes can disorders e.g. corners involving neovascularisation e.g. malignancies, respiractory disorders e.g. nonallergic rhinitis, renal disorders e.g. respiractory disorders e.g. nonallergic rhinitis, renal disorders e.g. centerkiney failure and blood related disorders e.g. myocardial conference transplantenon, for supporting cell culture of epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantened. for supporting end conference conference conference and seed as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid encoding a protein for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                    The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of mannodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. athhitis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. athhitis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. athhitis), neurological disorders (e.g. athhitis), neurological disorders (e.g. atherosclerosis), concerts (e.g. athma), cardiovascular disorders (e.g. atherosclerosis), concerts (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), concerts (e.g. athains) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                    Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   demyelinating disease, multiple sclerosis, Huntingdon's disease, neuropathy, carpal tunnel syndrome, cardiovascular disorder; congestive heart failure, cancer, immunosuppression, epilepsy;

The sequence is a cone snail O-superfamily conotoxin propeptide.

The peptides are useful for regulating the flow of sodium through sodium channels in an individual and the treatment or prevention of disorders associated with voltage gated ion channel disorders, including demyelinating diseases i.e. multiple sclerosis, optic neurowelitis, disseminated encephalomyelitis, adrenoleukodystrophy, acute transverse myelitis, progressive multifocal leukoencephalopathy, sub acute realerosing panecephalomyelitis (SSPB), metachromatic leukodystrophy, polizaeus-Merzbacher disease, spinal cord injury, botulinum toxin poisoning, Huntington's, compression, entrapment neuropathies i.e. ulnar nerve palsy, and carpal tunnel syndrome, cardiovascular disorders, hypersylvaemia, immunosuppression, cocaine addiction, cancer, cognitive dysfunction, neurotransmitter disorders cardiotic Lambert syndrome) and reversal of curare and other neuromuscular blocking drugs. The neurological disorder is a sailure, preferably one associated with applesy. The neurological disorder is neurotoxic injury associated with stroke, cerebrovascular accident, pression or spinal cond trauma, myocardial infarct, physical reaums.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               s, suffocation, perinatal asphyxia or hypoglycaemic events. Th is pain i.e. migraine, acute pain, persistent pain, nociceptive pain. The disorder is inflammation or a

                                                                                                                                                                                                                                                                                                                                                                                                                                            New O-superfamily polypeptides useful for treating voltage gated ion channel disorders, including demyelinating diseases i.e. multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cardiovascular disorder. A conotoxin peptide of is useful to alleviate pain in a mammal in pain or about to be subjected to a pai causing event, and to treat disorders associated with radical depolarisation of excitable membranes by activating a KATP channel, disorders include cardiac, ocular and cerebral ischaemia and asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cone snail; O-superfamily conotoxin; sodium channel; demyelinating disease; multiple sclerosis; Huntingdon; s disease; neuropathy; carpal syndrome; cardiovascular disorder; congestive heart failure; cancer; immunosuppression; epilepsy;

The present invention is concerned with the sequence of the genome of the SEN virus (SENV), and the proteins encoded by it. SENV is thought to be the cause of hepatopathies which are not linked to the presence of the hepatitis A, B and B viruses in man. The genome and proteins of this virus can be used in gene therapy and vaccination against the virus, which also causes disorders of the gastrointestinal tract, including Crohn's disease and lupus erythematosus, inflammatory diseases, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence is a cone snail O-superfamily conotoxin propeptide.

The peptides are useful for regulating the flow of sodium through sodium channels in an individual and the treatment or prevention of disorders associated with voltage gated ion channel disorders, including demyelinating diseases i.e. multiple sclerosis, optic neuromyelitis, diseaminated encephalomyelitis, adrenoleukodystrophy, acute transverse myelitis, progressive multifocal leukoencephalopathy, sub acute sclerosing panecephalomyelitis (SSPB), metachromatic leukodystrophy, Pelizaeus Merzbacher disease, spinal cord injury, botulinum toxin poisoning, Huntington's, compression, entrapment neuropathies i.e. ulnar nerve palsy, and carpal tunnel syndrome, cardiovascular discorders, i.e. cardiac arrhythmias and congestive heart failure, reactive gliosis, hyperglycaemia, immunosuppression, cocaine addiction, cancer, cognitive dysfunction, neurotransmitter disorders is addiction, lambert syndrome) and reversal of curare and other neuromuscular blocking drugs. The neurological disorder is a neurotoxic injury is associated with stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, corder is pain i.e. midraine, contrained acute pain, persistent pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disorder is pain i.e. migraine, acute pain, persistent pain, neuropathic pain, nociceptive pain. The disorder is inflammation or a cardiovascular disorder. A conotoxin peptide of is useful to alleviate pain in a mammal in pain or about to be subjected to a pain causing event, and to treat disorders associated with radical depolarisation of excitable membranes by activating a KATP channel, the disorders include cardiac, ocular and cerebral ischaemia and asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New O-superfamily polypeptides useful for treating voltage gated ion channel disorders, including demyelinating diseases i.e. multiple

                                                                                                                                                                                                                       The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                       New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polyneptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haemacopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, foetal protein, cytostatic, immunosuppressive, immunostimulant, nootropic, neuroprotective, thrombolytic, osteopathic, antiinflammatory, gene therapy, antisense therapy, cancer, immune disorder, growth disorder, osteoporosis, thrombolytic disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
Novel fetal proteins useful for the treatment and diagnosis of diseases associated with dysfunction of the protein e.g. cancers, immune disorders, growth disorders, thrombolytic disorders, nervous system disorders and inflammation -
                                                                                  The invention relates to novel foetal polypeptides encoded by polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polynucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present an expressed sequence is a polypeptide encoded by a cDNA assembled using an expressed sequence tage (EST) found to be expressed in human foetal tissue cDNA libraries.
                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                   .

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 8, Application PC/TUS9603965
GENERAL INFORMATION:
APPLICANT: Kwon, Byoung Se
APPLICANT: Kang, Chang-Yuil
TITLE OF INVENTION: Monoclonal antibody against human
TITLE OF INVENTION: receptor 4-1BB
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
                                          Sequence 11, Application US/09573986

Patent No. 6455040

GENERAL INPORMATION:
APPLICANT: Wei, Jian
APPLICANT: Ruben, Steven
APPLICANT: Gentz, Reiner
APPLICANT: 2000-05

TITLE OF INVENTION: Tumor Necrosis Factor Receptor 5
FILE REFERENCE: 1468.126004

CURRENT APPLICATION NUMBER: US/09/573,986

CURRENT FILING DATE: 2000-05-18

NUMBER OF SEQ ID NOS: 27

SEQ ID NO 11

SEQ ID NO 11
